

AI Assistant Instructions

www.dincelli.com/chat

This AI assistant has been developed to support you in Dr. Dincelli's cybersecurity classes. While generative AI tools like ChatGPT can be helpful when used appropriately, they sometimes generate inaccurate or misleading information, and the way these companies use your data is not always clear. For these reasons, Dr. Dincelli believes that higher education should provide students with private, reliable, and course-specific AI tools that are designed to enhance learning in a safe and trustworthy environment. By offering this tool, our goal is to help you succeed in a rapidly changing educational landscape while protecting your privacy and tailoring the experience to your course needs.

This AI assistant is different from ChatGPT in several important ways.

- **Privacy:** Only your instructor has access to your interactions. Your data will not be shared with outside companies.
- **Relevance:** The AI assistant is customized to your class. It uses your textbook, lecture slides, instructors' previous transcripts from Zoom sessions, syllabus, and even assignment and exam information as knowledge sources. This ensures that the responses you receive are more accurate, aligned with the course material, and your instructor's tone.
- **Productivity Tools:** The assistant includes built-in features to make your studying easier. You can take notes directly in the platform, save your notes and conversations securely in the cloud, and even download them as a PDF for later review.
- **Integrated Course Support:** Unlike general AI tools, this assistant can reference specific class deadlines, assignments, and exam preparation topics.
- **Personalization:** Your activity is linked to your unique account, so the assistant can adapt over time to your study habits and highlight areas where you may need extra practice.
- **Consistency:** Since the content is restricted to your course material, the assistant is less likely to "hallucinate" or give irrelevant answers.

The tool is completely free and optional. You do not need to use it if you prefer not to. It is a prototype created for both educational and research purposes. While we hope you will find it helpful, we do not want to add unnecessary stress to your already busy schedule. Occasionally, we may offer extra credit opportunities by asking for your feedback on your experiences with the tool.

Our Teaching Assistant, Lukasz, will send you your personal credentials. Each student has a unique account. Please do not share your credentials with others. Below, you will find step-by-step instructions to get started.

We hope you enjoy exploring this tool and that it becomes a useful resource in your learning journey!

Ersin Dincelli

ersin.dincelli@ucdenver.edu

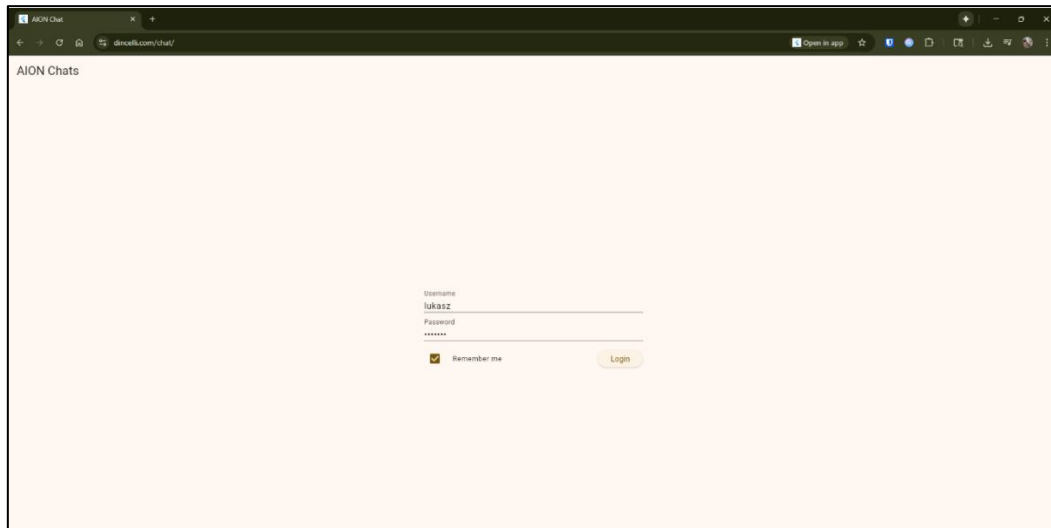

Getting Started:

1. Access the Platform:

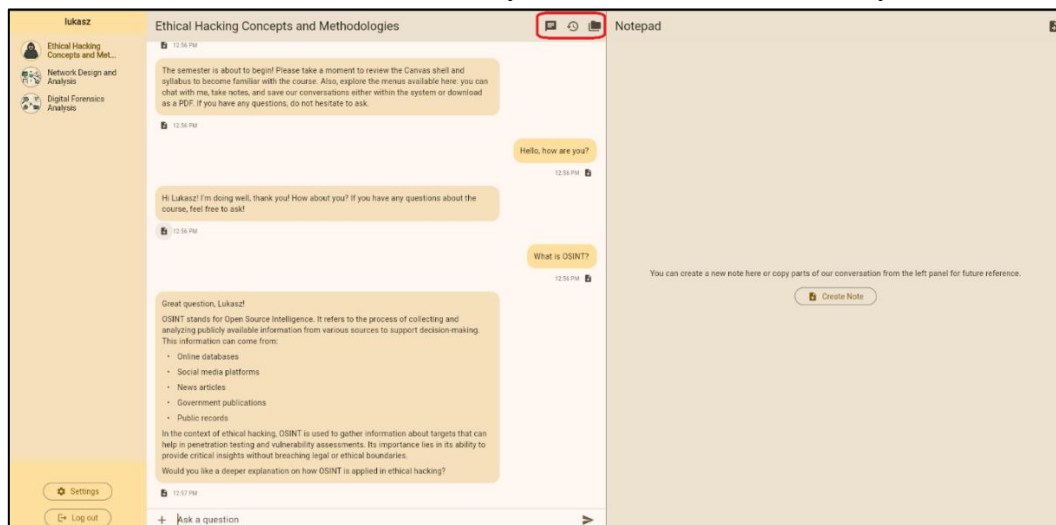

- Go to: www.dincelli.com/chat

2. Log In:

- Enter the username and password sent to you by our TA.
- Keep this information private and do not share it with others.

- On the left side of the screen, you will see a list of courses you are enrolled in.

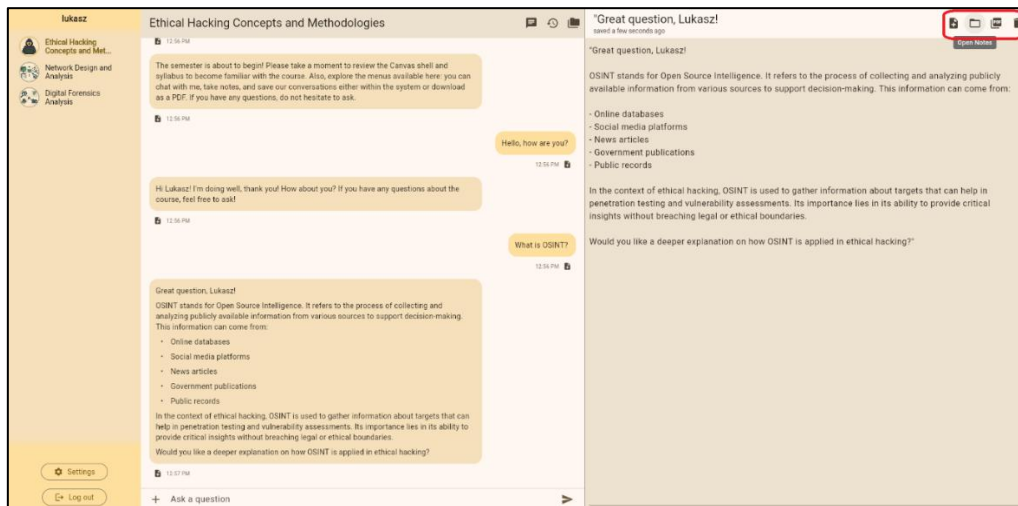

3. Explore the Features

- Ask the AI questions about: Lecture slides, the textbook, assignments, exam preparation, class announcements and deadlines. You can also ask any questions about the course or the content you may have.
- Example prompts you can try:
 - “Explain the concept of reconnaissance in ethical hacking.”
 - “Summarize Chapter 3 of the textbook.”
 - “What are the main steps of footprinting?”
 - “When is the midterm exam?”

Chat Window

- The **central area** of the screen displays the chat window.
- You can send messages and ask questions related to the selected course.
- You can **start a new chat** or **open previous conversations**.
- You can also **enable or disable the notes panel**.

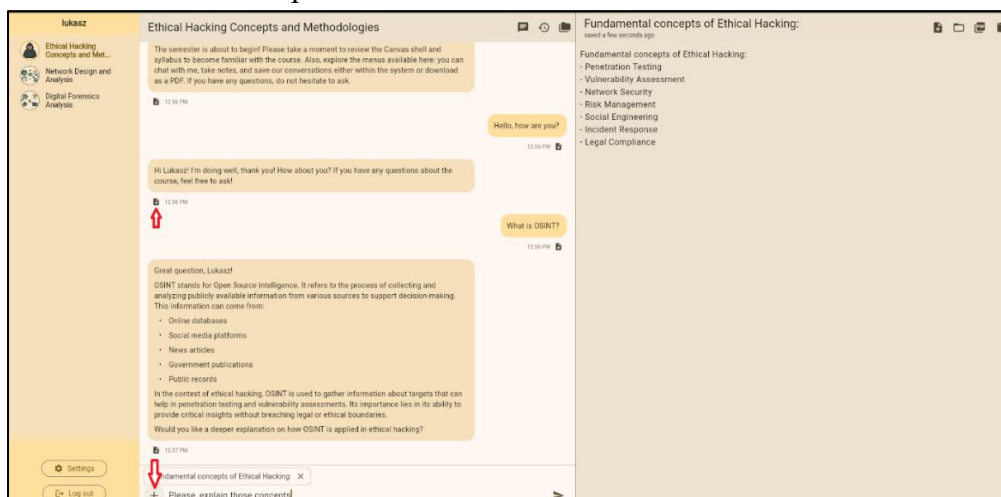

Use It as a Study Companion

1. Notes Panel

- The notes panel is located on the **right side** of the screen.
- You can paste received messages and your own notes there.
- You can edit notes using the buttons at the top of the panel:
 - **New Note:** Creates a blank document for new information.
 - **Open Note:** Opens saved notes.
 - **Generate PDF:** Creates a PDF file from your current notes.
 - **Delete Note:** Removes the selected note.

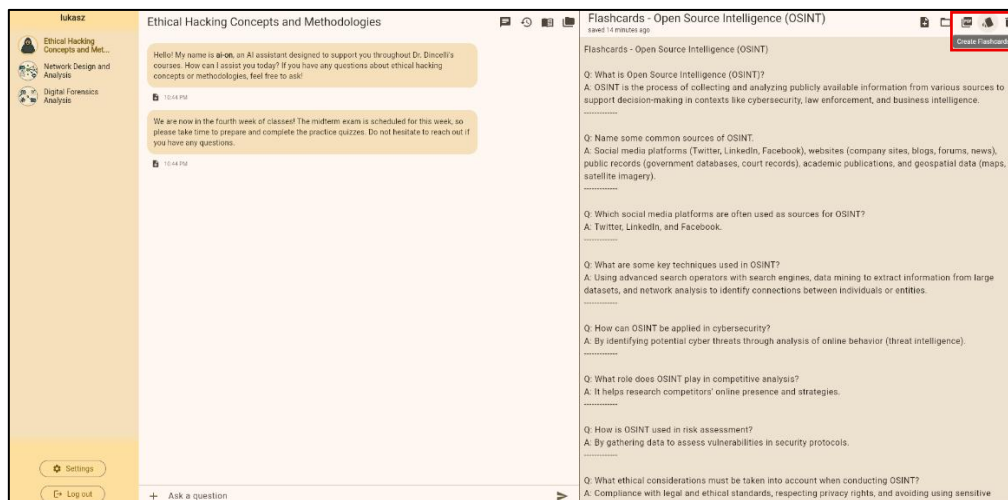

2. Using Notes in a Conversation

- During a conversation, you can **attach notes to the chat**.
- To do this, click the “+” icon next to your note – this allows the assistant to refer to it in responses.

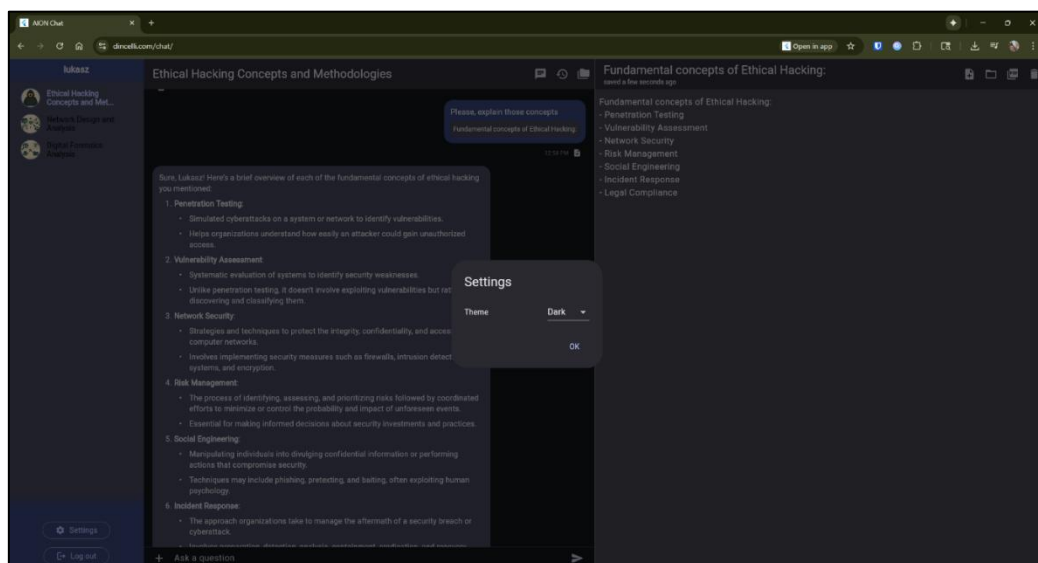

3. Create Flashcards

- Using your notes and conversations, you can create **flashcards**.

Settings:

- You can switch between courses (if you have access to them) on left hand side panel.
- You can switch between **light mode** and **dark mode** in the settings.
